

Asmara rural microgrids

Overview

The solar-powered mini-grids with a 2.25 MW generation capacity providing modern and affordable energy to the rural towns of Areza and Maidma in the south of the country and 33 off-grid. In many African Sub-Saharan countries, the access to electricity still represents a critical point to face, in order to develop the region, limiting the life quality development and the Gross Domestic Product (GDP) growth. Moreover, this region benefits of a high solar radiation, making the installation of photovoltaic (PV) panels extremely. In rural Africa, where traditional energy infrastructure often falls short, the future shines brighter with the potential of microgrid systems. These small-scale power grids, powered by renewable sources like solar, wind, and hydropower, are pivotal for telecommunications giants like MTN to expand. SCM INDUSTRIES BESS delivers BESS containers, industrial microgrids, photovoltaic containers, foldable PV containers, telecom tower energy storage, off-grid/hybrid microgrid systems, diesel-PV hybrid microgrids, telecom room power, and source-grid-load-storage.
