Overview

The need to reduce greenhouse gas emissions has catalysed the rapid growth of renewable energy worldwide. However, the intermittent nature of renewable energy requires the support of energy storage system. ••Prominent tools and facilitators that are considered when making. Energy storage systems (ESS) have been around for a long time with the earliest and most popular form being the Pumped Hydro Storage. Other forms of ESS are compressed air, f. In general, policies are designed to establish boundaries and provide regulatory guidelines. According to the Energy Storage Association (ESA), the policy tools fall under three c. ESS policies are being introduced worldwide for different reasons though the main reason is because of the enormous benefits in reducing the greenhouse gases emissions. Unite.
