

Europe renewable energy italy

Overview

Rapid growth in the deployment of solar, wind, and bio energy in recent years has led to Italy producing over 41% of its electricity from renewable sources in 2025, and adding 7.48 GW (7,480 MW) capacity in 2024. Renewable energy developed rapidly in Italy between 2005 and 2023, nearly doubling, and provided the country with a means of diversifying from its historical dependency on imported fuels. Solar power accounted for around 17% of the total electric production in the country in 2025. The decision allows Italy to support new renewable electricity projects through. The European Commission has officially approved a significant state aid scheme for Italy, valued at 23 billion euros. This regularly updated guide provides an overview of how far. The European Commission announced that it has approved a €23 billion state aid program by Italy to support the deployment of renewable electricity generation, aimed at accelerating the country's energy transition and helping meet EU renewable energy targets. The program will support the.
