

How big should an outdoor power supply be for two or three days

Overview

For a two-day trip, you'd need at least 1,380Wh. Weekend campers usually do well with 500-1000Wh stations. Before diving into sizing, it's crucial to understand two key measurements that every power station displays: This tells you how much power the station can deliver at any given moment. If you have a 1000W power station, it can run devices that. If you've ever bought a "500W" unit and wondered why it didn't last long—or why a "300Wh" unit couldn't run your device—this guide is for you. Last updated: January 12, 2026 • Author: Michael Taft Watts (W): how much. Most people figure the biggest power station they can buy is the best one. Purchasing too much capacity is money down the drain, heavy, and adds unnecessary bulk to your outing. Most people need a 500-1000 watt-hour unit for camping and small emergencies, while home backup typically requires 1500-3000 watt-hours or more. We'll keep it human and hands-on: you'll learn how to calculate watt-hours, estimate runtime, choose an inverter size (continuous vs surge), and figure out recharge. How long your devices can operate depends on the power station's capacity. The outdoor power station's capacity, quantified in watt-hours (Wh), reflects its electrical storage capacity.
