

Overseas household energy storage system growth is slow

Overview

Over the past three years, household energy storage systems (ESS) have seen explosive growth, driven by rising demand for renewable energy integration. However, recent data suggests a 6. Despite policy changes and uncertainty in the world's two largest markets, the US and China, the sector continues to grow as developers push forward with larger and larger utility-scale projects. Since 2024. According to Bloomberg New Energy Finance predictions, the global cumulative installed capacity for household energy storage is anticipated to surpass 15GW/34GWh by the close of 2023, with projections indicating a surge to 93GW/196GWh by 2030. EESA statistics for the first half of 2023 reveal a. Fueled by factors such as a significant uptick in wind and solar installations, an expedited process of power market reform, fluctuations in ESS prices, and clearer policies, the global energy storage market is experiencing a period of rapid expansion.
