

Solar energy design for courtyard lighting

Overview

The proper design of courtyards and atriums is key in providing sufficient daylight inside buildings as well as major energy savings in electric lighting. Although a suitable design requires calculations using lighting sim. ••Two procedures are proposed to define the daylight factors in. 1.1. State of the artThe proper design of courtyards and atriums is essential for the provision of sufficient daylight inside buildings, producing a notice. 2.1. Scale model procedureThe first procedure for data collection consists in measuring the daylight factors on the floor of a courtyard scale model in an artificial sky. The. 3.1. Daylight factors in scale modelsAs described in the scale model procedure, the daylight factors were obtained for the study points, according to a variable height to length ratio of t. 5.1. Contrasting with scale modelsOnce the predictive method is defined, its accuracy is determined according to the procedures proposed. As described in the methodology, th.
