

# What are the photovoltaic auxiliary material brackets

## Overview

T-shaped corners, triangular pieces, sandalwood connectors, medium pressure blocks, edge pressure blocks, and other materials are commonly used as accessory components in photovoltaic brackets. Photovoltaic bracket accessories play an indispensable role in the construction of steel brackets and aluminum alloy brackets. Concrete supports are mainly used in large-scale photovoltaic power stations. Because of their self-weight, they can only be placed in aluminum alloy, carbon steel and stainless steel. Think of them as the skeleton that holds your solar panels in place - without proper support. Currently, the common module auxiliary materials include PV busbar, PV Interconnector. There are eight kinds of auxiliary materials, including PV busbar, PV interconnector, tempered glass, adhesive film, backsheet, aluminum alloy, silicone, and junction box. Using emerging technologies such as perovskite solar cells.
